**ENVIROGLAS®**

*Thank you for your interest in our line of products from EnviroGLAS®. Please find below some helpful information that relates to representation, purchasing, pricing, shipping and installation of our product line. EnviroGLAS® offers a variety of recycled glass and porcelain products for decorative applications. Affordable and unique EnviroSLAB countertop slabs and EnviroPLANK floor tiles and walls are custom manufactured with 100% recycled glass and/or porcelain and color pigmented epoxy resin. Product representation is currently conducted from our corporate office in Plano TX. We ship worldwide.*

## **ENVIROSLAB®**

Suitable for kitchens, bathrooms, or any other countertop application, EnviroSLAB countertops are now available in two sizes; **27"x84"x1" (nominal)** and **60"x84"x1" (nominal)**. A reputable local countertop fabricator will be able to complete the installation. We recommend an installer experienced with granite, marble and other synthetic resin materials. The fabricator/installer can easily cut the polished slabs to size and then seam pieces together if necessary (1/64 inch) to fit just about any layout. The installer will also measure for and complete sink cut-outs and edge detailing. We do have a number of schematics available on our website to assist in the installation and can send a sample template for testing the EnviroSLAB material.

EnviroSLAB is a signature countertop that allows one to make an artistic and environmental statement. Still, many people inquire about how EnviroSLAB compares to granite. The short answer is: very favorably. The beauty and durability of granite and EnviroSLAB are comparable - both are stunning and will last the lifetime of a building. Yet people concerned about the natural environment appreciate that while granite must be taken from the earth, EnviroSLAB honors the earth by diverting trash from the landfill. EnviroGLAS also compares favorably to Zodiaq®, Silestone®, IceStone® and Vetrozoo.

EnviroSLAB is highly resistant to common stains and can be cleaned easily by applying neutral cleaners and maintained by applying a professional grade marble/granite polish. EnviroSLAB is heat and scratch resistant. EnviroSLAB weighs approximately 13 pounds per square foot. We do recommend using a cutting board under sharp objects and a heat-proof trivet under hot cookware. EnviroSLAB emits no volatile organic compound (VOC) and does not require a seal. EnviroSLAB is not recommended for outdoor applications. ***We welcome your imagination!***

Standard 27"x84"x1" EnviroSLAB countertops sell for ***\$50 per square foot.*** Large 60"x84"x1" sell for ***\$60 per square foot.*** Safety-enhancing EnviroGLO aggregate or other specialty aggregate or clear or another custom pigmented epoxy resin increases the cost from \$70-\$100 per square foot. Installment costs may range from \$35 a square foot and up.

## ENVIROPLANK®

These sustainable and unique Terrazzo flooring planks and wall panels are available in four sizes. **6"x36"x1/2" (nominal), 12"x36"x1/2" (nominal), 24"x36"x1/2" (nominal) and 60"x72"x1/2" (nominal)** EnviroPLANK is custom manufactured with 100% recycled glass and/or porcelain and color pigmented epoxy resin. The planks are laid out in a staggered or random bond fashion, and to achieve a look similar to that of a wood floor. The seam can be as small as 1/64". A reputable local tile installer will be able to complete the installation using a thin set mortar, stain resistant non sanded grout and a wet saw with a diamond blade. EnviroPLANK is a great solution for commercial and retail applications along with residential use for foyers, kitchens, bathrooms (including showers) and laundry rooms. EnviroPLANK weighs approximately 6 pounds per square foot. ***We welcome your imagination!***

Care and maintenance of EnviroPLANK is cost-effective and simple - a neutral cleaner and water will keep the tile looking great. EnviroPLANK is extremely durable for high traffic areas. Custom EnviroPLANK Terrazzo in standard colors sells for ***\$25 to \$40 dollars per square foot*** and will last the lifetime of a building.

Custom EnviroSLAB and EnviroPLANK orders usually arrive within 4-6 weeks. Shipping and crate charges will vary based on quantity and weight. One EnviroSLAB crate (\$300 - \$400) can package up to (5-7) slabs. One EnviroPLANK crate (\$300) can package up to (200 sq ft).

## ENVIOTRAZ®

If the flooring area is larger than 10,000 square feet, you may want to consider 3/8" poured-in-place EnviroTRAZ. On-site terrazzo installation costs average \$25-\$50 per square foot and up depending on the local economy and size/scope of the project. Due to low maintenance and durability, EnviroTRAZ is one of the most economical flooring applications for long term asset buildings. EnviroTRAZ offers endless color and design possibilities. ***We welcome your imagination!***

## ENVIROSCAPE®

EnviroSCAPE is the newest trend in decorative, eco-friendly, sustainable landscaping! EnviroGLAS offers a variety of recycled glass and porcelain aggregate options for decorative use as landscaping groundcover or mulch, in aquariums and fountains, and any place sand is used. The proprietary process produces recycled glass and porcelain in a variety of sizes with virtually no sharp edges. Glass and porcelain ground cover works especially well in garden pathways where drainage and erosion is a factor. Prices range from \$25 to \$35 per bag depending on the quantity and color/type of aggregate.

**At one inch of depth, one 50 lb bag will provide coverage over 7 square feet, or .5 cubic feet. A simple calculation: *square footage x depth x 7 = total number of pounds needed to cover area.***

In keeping with environmental stewardship, we do not produce catalogues or sample binders. Prospective clients can visit our sample gallery at [www.enviroglasproducts.com](http://www.enviroglasproducts.com). We look forward to working with you! ***Please call 888.523.7894 or email us at [enviroglas@gmail.com](mailto:enviroglas@gmail.com)***
